

General

First report of ENSREG, as adopted in July 2009

As a matter of fact, there are 148 nuclear power reactors operating in 15 European Union (EU) Member States, producing one third of all electrical energy. Some units have already been decommissioned or are in the process of decommissioning, many are undergoing substantial preparations for long-term operation and several new units are under construction or seriously planned. In addition, there is a substantial number of other nuclear and radioactive waste management installations within the European Union. This situation

Nuclear Safety and Waste Regulation

Nuclear safety and the safe management of radioactive waste and spent fuel are national responsibilities. EU Member States have national regulatory bodies (members of ENSREG) and national legislation to regulate their own nuclear activities, including the management of spent fuel and radioactive waste. The three main influences on the development of national nuclear safety legislation and practices are:
